Received: December 2, 2002

Abstract. First multicolour photoelectric light curves of the southern eclipsing binaries GW Car, V685 Cen, V742 Cen and V764 Sco obtained in the years 1969, 1974, 1977-8 at the Leiden Southern Station using Walraven *VBLUW* filters are presented.

Key words: eclipsing binaries – photometry

1. Program

In 1965-78 the first author (CJvH) initiated a program for obtaining multicolour photoelectric light curves of observationally neglected southern eclipsing binaries. The *VBLUW* photoelectric observations were performed using the Walraven five-colour photometer (Walraven & Walraven, 1960) attached to the 0.9 m light collector of the Leiden Southern Station near Hartebeespoordam, South Africa. The effective wavelengths and band-widths of Walraven filters are as follows: *W* (327 nm, 15 nm), *U* (367 nm, 26 nm), *L* (390 nm, 29 nm), *B* (429.5 nm, 42 nm), *V* (545 nm, 85 nm).

2. Observations

We present five-band *VBLUW* observations of the eclipsing binary GW Car (HD 83475) and four-band *VBLU* observations of the eclipsing binaries V685 Cen (HD 99218), V742 Cen (HD 99628) and V764 Sco (HD 162985) as part of the program mentioned above. Our observations of GW Car were obtained in 1969, 1974 and 1977, V685 Cen in 1977-78, V742 Cen and V764 Sco in 1974. The journal of observations is given in Table 1.

Table 1. Journal of photometric observations of GW Car, V685 Cen, V742 Cen and V764 Sco

The orbital phases of the binaries were calculated using the ephemerides derived in Chochol et al. (2003):

$$\text{GW Car : Min I} = \text{HJD } 2\,440\,316.8699 + 1.12890795 \times E, \quad (1)$$

$$\qquad\qquad\qquad \pm 9 \qquad\qquad\qquad \pm 35$$

$$\text{V685 Cen : Min I} = \text{HJD } 2\,443\,586.3313 + 1.19096085 \times E, \quad (2)$$

$$\qquad\qquad\qquad \pm 13 \qquad\qquad\qquad \pm 26$$

$$\text{V742 Cen : Min I} = \text{HJD } 2\,442\,169.87349 + 0.8644556 \times E, \quad (3)$$

$$\qquad\qquad\qquad \pm 20 \qquad\qquad\qquad \pm 18$$

$$\text{V764 Sco : Min I} = \text{HJD } 2\,442\,192.46601 + 1.5426320 \times E. \quad (4)$$

$$\qquad\qquad\qquad \pm 19 \qquad\qquad\qquad \pm 28$$

The magnitudes and colour indices of comparison stars are given in Table 2. The magnitude in Johnson system V_J is easy to transform to magnitude in Walraven system V_W using the equation

$$V_J = V_W - 0.062(B - V)_W + 6.874. \quad (5)$$

Table 2. The comparison stars and their magnitudes in Johnson (subscript J) and Walraven system (subscript W)

star	comparison	V_J	$(B - V)_W$	$(L - B)_W$	$(U - B)_W$	$(W - U)_W$
GW Car	HD83502	10.14	0.083	0.286	0.866	0.250
V685 Cen	HD99415	8.97	0.071	0.106	0.327	0.072
V742 Cen	HD100119	7.16	-0.055	0.183	0.760	0.140
V764 Sco	HD162967	8.52	-0.045	0.225	0.684	0.098

Individual differential $VBLUW$ magnitudes of GW Car with respect to the comparison star are given in Tables 3 and 4 and displayed in Fig 1. Individual differential $VBLU$ magnitudes of V 685 Cen and V742 Cen with respect to the comparison star are given in Tables 5 and 6 and displayed in Fig. 2. Due to the large number of individual observations of V764 Sco (see Fig. 2), we present in Table 7 the weighted normal points in intensities instead of individual observations. They were calculated from individual observations using the approach described in paper Chochol et al. (2003).

Figure 1. $VBLUW$ observations of GW Car.

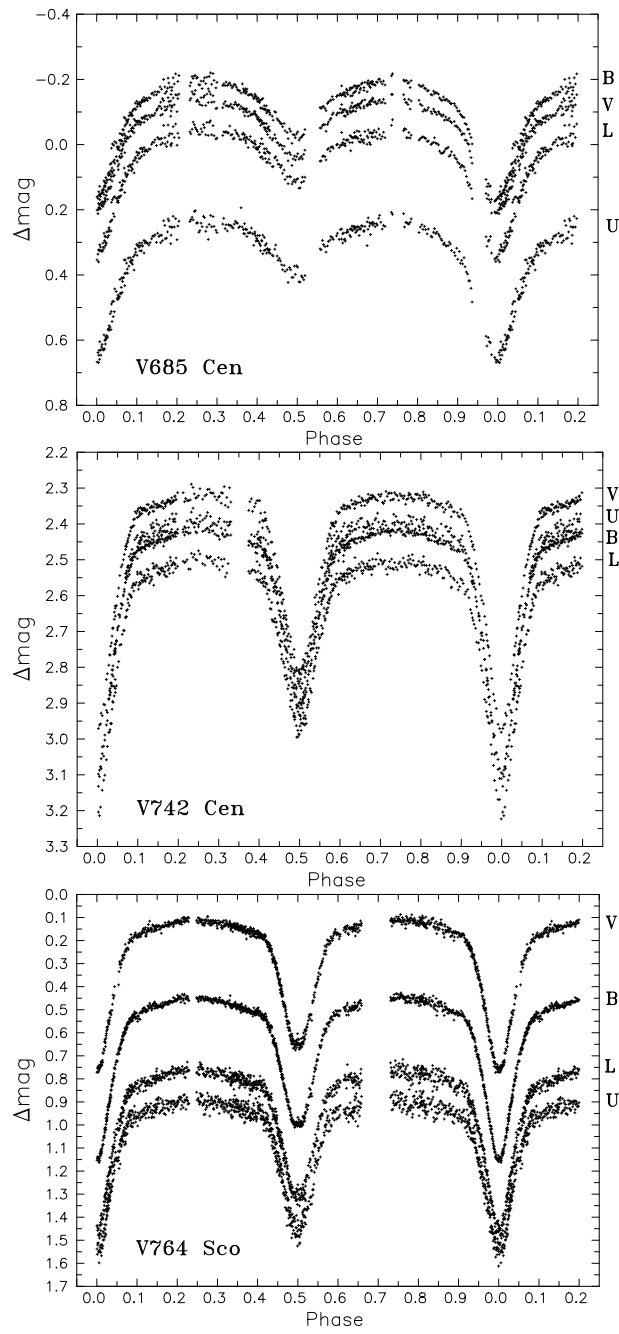

Figure 2. *VBLU* observations of V685 Cen, V742 Cen and V764 Sco.

Table 3. Individual differential *VBLU* magnitudes of GW Car with respect to the comparison star. Heliocentric julian dates are $JD = JD^* + 2\,400\,000$
