Received: February 7, 2012; Accepted: March 21, 2012

**Abstract.** The paper presents results of position determinations of minor planets carried out at the Skalnaté Pleso Observatory in 2011. A total of 162 accurate positions of 33 minor planets are given.

**Key words:** asteroids – astrometry

### 1. Introduction

The present paper is a continuation of our previous papers which gave the results of positional CCD observations of minor planets obtained at the Skalnaté Pleso Observatory (the last paper of this series being Neslušan, 2006) and contains the observations made in 2011. Missing observations from 2005 to 2010 will be published one after the other simultaneously with new obtained positions.

The observations were performed with a 0.61-m f/4.3 reflector and a CCD camera SBIG ST-10XME. We obtained CCD frames using a Johnson-Cousins *R* filter with  $3 \times 3$  binning and resolution of 1.6 arcsec/px. We applied the standard calibration with dark and flatfield frames with IRAF tools. The positions of minor planets were made using the method of plate constants within software *Astrometrica* (Raab, 2011). The reference stars were selected from UCAC-3 and USNO-B1.0 star catalogues.

A total of 162 accurate positions of 33 minor planets are given, as well as a list of collaborators.

### 2. Positions of minor planets

Table 1 presents the results of positional CCD observations. The data have been arranged according to serial numbers of minor planets.

**Table 1.** The individual columns of the table contain the following information: N – ordinal number of observation, Date U.T. – date and time of the middle of the exposure,  $R.A_{.2000}$  – right ascension for equinox 2000.0 (in h, m, s),  $Decl_{.2000}$  – declination for equinox 2000.0 (in  $^{\circ}$ ,  $'$ ,  $''$ ),  $d\alpha$  – the mean residual in R.A. (in s),  $d\delta$  – the mean residual in Decl. (in  $''$ ), Magn. – magnitude of the minor planet in  $R$  filter, dmag – the mean residual in magnitude (in mag), Ref. st. – number of reference stars with a known position and/or magnitude, that are used to find the plate constants and photometric calibration of an image.

N	Date U.T.	$R.A_{.2000}$	$Decl_{.2000}$	Magn.	Ref. st.

### 3. List of collaborators

**Table 2.** A list of people who participated in the observations and the position measurements and reductions.

Name	Exposures	Measurements	Reductions
G. Červák	37	–	–
M. Husárik	1	162	162
Z. Kaňuchová	1	–	–
Z. Krišandová	8	–	–
M. Pikler	37	–	–

**Acknowledgements.** This work has been supported by the Slovak Grant Agency for Sciences VEGA (Grant No. 2/0022/10) and by the realisation of the project ITMS No. 26220120029, based on the supporting operational Research and development program financed from the European Regional Development Fund.
