Received: January 8, 2013; Accepted: February 12, 2013

**Abstract.** The paper presents the results of CCD astrometry of comets carried out at the Skalnaté Pleso Observatory in 2002. A total of 225 observations of 30 comets are given.

**Key words:** comets – astrometry

### 1. Introduction

This paper is a continuation of the previous papers which gave the results of positional observations of comets made at the Skalnaté Pleso Observatory (the last paper of this series being Svoreň, 2012) and contains positional comet observations made in the year 2001.

The article contains the cometary positions obtained by a 0.61-m f/4.4 mirror telescope of the Skalnaté Pleso Observatory equipped with a CCD camera SBIG ST-8. The CCD camera is placed at the Newton focus and the size of the observed sky area is  $13 \times 19$  seconds of arc.

The reduction constants of the Skalnaté Pleso 0.61-m telescope are as follows:

$$\lambda = -1^h 20^m 58.70^s,$$

$$\varphi = +49^\circ 11' 20.0'',$$

$$h = 1783 \text{ m a.s.l.},$$

$$\rho = 0.99836 \text{ of the equatorial radius of the Earth.}$$

The reference stars were selected from the USNO-A V2.0 Star Catalogue (Monet et al., 1998). The method of plate constants and the computer programme Astrometrica (Raab, 1993) were used for reduction of obtained frames.

### 2. Positions of comets

The data have been arranged according to the new system designation. A list of collaborators is given, together with their share in photographing, measuring and reducing the positions.

The individual columns of the table contain the following:

N – ordinal number of observation

Date U.T. – date and time of the middle of the exposure

*R.A.*<sub>2000</sub> – right ascension for equinox 2000.0 (in h, m, s)

*Decl.*<sub>2000</sub> – declination for equinox 2000.0 (in °, ', '')

Magn. – R magnitude of the comet

Ref. st. – number of reference stars used to calculate the plate constants and photometric calibration of an image

dα – the mean residual in R.A. (in s)

dδ – the mean residual in Decl. (in '')

dmag – the mean residual in mag.
