

UBV PHOTOGRAPHIC PHOTOMETRY OF STARS IN THE REGION

AR₁₉₅₀: 17^h03^m - 17^h41^m Decl₁₉₅₀: -28.8° to -33.4°

A. ANTALOVÁ

Department of Physics, The College of Transport, Žilina

Abstract: The *UBV* photographic photometry of 2460 stars and the computed quantities, the interstellar absorption A_V , the photometric distance d , the spectral type are given in the Catalogue (Tab. 2). The catalogue number is used to mark the stars in the identification maps 1 to 8 and the number for Tr 28 in map 9, NGC in map 10 and NGC 6416 in map 11. The accurate equatorial and galactic coordinates of 250 OB stars are in Table 3. Figures 2, 3 and 4 represent the pattern of interstellar absorption as a function of distance in the region investigated.

Introduction

The region investigated in the Milky Way is of rectangular shape with an area of 34 square degrees, limited in right ascension from 17^h03^m to 17^h41^m and in declination from -28.8° to -33.4° at the 1950 equinox. The observational material for three-colour photographic photometry was obtained by the Big Schmidt at Mt. Palomar. The data on the filters and emulsion used are in Table 1.

The effective wavelengths of this colour system *ubr* were determined by Vetešník (1962). The comparison of the *ubr* photometric system with Johnson's *UBV* system (1953) was carried out by Perek (1962) and Vetešník (1962); according to these papers the *ubr* to *UBV* transformation is linear. The systems have the following effective wavelengths:

$$\begin{array}{ll} u = 3640 \text{ \AA}, & U = 3500 \text{ \AA}, \\ b = 4430 \text{ \AA}, & B = 4350 \text{ \AA}, \\ r = 6410 \text{ \AA}, & V = 5550 \text{ \AA}. \end{array}$$

Transformation of the *ubr* system to the *UBV*

Rohlf's et al. (1959) published the photoelectric *UBV* magnitudes of 132 stars from NGC 6405 (M6) obtained by the 60-inch reflector of the Boyden Observatory. The photographic brightnesses of the stars of the present observational material were measured by means of a Becker-type iris photometer at the Konkoly Observatory. The method of least squares was used to derive the transformation equations of the *ubr* colour system to the *UBV* system. The transformation equation for the individual colours read as follows:

$$\begin{aligned} U &= -0.01190 u + 18.907 \\ &\quad \pm 20 \quad \pm 071 \\ B &= -0.01099 b + 18.252 \\ &\quad \pm 06 \quad \pm 061 \\ V &= -0.01122 r - 0.00452 (b - r) + 16.872 \\ &\quad \pm 31 \quad \pm 19 \quad \pm 052 \end{aligned} \quad (1)$$

The computation of transformation equations (1) is based on 40 stars in *U*, 60 in *B* and 42 stars in *V*. The faintest star observed had $m_V = 15^m.42$, which is not the limiting brightness of the photographic plate, but the weakest standard star.

The mean square deviations of the individual colours were determined not only for the standard stars, measured by Rohlf's et al. (1959), but also for other stars from NGC 6405, which were measured by Eggen (1961):

$$\begin{aligned} \sigma U &= 0^m.06, & (72 \text{ stars}) \\ \sigma B &= 0^m.06, & (113 \text{ stars}) \\ \sigma V &= 0^m.05, & (117 \text{ stars}) \end{aligned} \quad (2)$$

The Interstellar Absorption Determined by the *Q*-method

The three-colour photometry makes it possible to determine the interstellar absorption from interstellar reddening. The method is more suitable for star clusters (approximately the same reddening) and for the stars of the field the reduction is determined under the assumption of Vth class luminosity. In the present paper the following relations were used for the computation:

$$Q = (U - B) - 0.72(B - V), \quad (3)$$

$$(B - V)_0 = 0.332 Q, \quad (4)$$

$$E_{B-V} = (B - V) - (B - V)_0, \quad (5)$$

$$A_V = 3.0 E_{(B-V)}, \quad (6)$$

$$V_0 = V - A_V. \quad (7)$$

Fig. 1. The scheme of the investigated region in the Milky Way. The numbers on the figure correspond to the numbers on the identification charts 1 to 8.

Fig. 2. The dependence of the interstellar absorption on the direction and on the distance. The centre of the regions PP 12-1 to PP 12-4 are listed in Table 4.

Fig. 3. The dependence of the interstellar absorption on the direction and on the distance. The centre of the regions PP 12-5 to PP 12-8 are listed in Table 4.

The numerical coefficients for the reddening line in the two-colour diagram and the ratio of the total and differential absorption, in other words Eqs (3), (4), and (6), were investigated in the papers of Blanco (1956, 1957). Blanco determined the value $R = A_V/E_{B-V} = 3.0$. Hiltner and Johnson (1956) derived $R = 3.0 \pm 0.3$. Fernie's and Marlough's paper (1963) implies that R changes with galactic longitude. These authors derived the value $R = 2.90 \pm 0.19$ for the region 1^{II} in the interval $(342-348^\circ)$, which is closer to our value of 3.0 in Eq. (6). The absolute magnitude M_V for the computed values of $(B - V)_0$ was adopted from Weaver and Ebert (1964). The luminosity was not differentiated in the computa-

Fig. 4. The dependence of the interstellar absorption on the direction and on the distance. The centre of the regions PP 12-9 to PP 12-12 are listed in Table 4.

tion, all stars having M_V for the V -th luminosity class, irrespective.

The determination of the intrinsic colour $(B - V)_0$ according to Eqs (3) to (7) was thus affected by the observation errors, and its reduction (errors with values (2)), as well as by the fact that the coefficients in Eqs (3) to (7) are only

average values and may differ considerably for some regions of the Milky Way. In determining the spectral type and the implied M_V the undifferentiated multiplicity of stars is reflected considerably.

As regards the undifferentiated stars with emissions and also a higher luminosity than class V , the values, computed in the usual manner from Eqs (3) to (7), yield values higher than in reality and, therefore the reddening correction is too high. The estimate of the said factors leads to a 20% relative error in the photometric distance.

Catalogue of 2460 Stars (Table 2) and Identification Maps

The stars, included in the catalogue, were selected for photometry by comparing the diameters of the stars in the u , b , and r colours by a blinkcomparator. This method yields good results for weak stars and also in regions with a high surface density of stars. As can be seen in the catalogue, the spectral type computed from the UBV photometry are close to the spectra determined in HDE for the brighter stars. 29 brighter stars, denoted as OB in the spectral review Luminous Stars in the Southern Milky Way (Stephenson, Sanduleak, 1971), were denoted as OB independently by this method and published in an earlier paper (Antalová, 1970).

The selecting of the stars for measuring is the following. By a suitable exposure of the individual colours (Tab. 1) one can achieve that stars of spectral class O-B3 have the diameter of the disk u larger than b and the diameter r equal to b , or slightly smaller. Stars with the difference $u - b$ larger than $b - r$ were adopted for this photometry. As a result of reddening the differences $u - b$ and $b - r$ are shifted towards redder values.

The selected stars were processed by an iris photometer of the Becker type (Becker 1956). The photometric system of this catalogue was created by connecting up our ubr photographic data with the UBV photo-electric brightnesses of the stars of NGC 6405 in Rohlfs et al. (1959). A different photometric system was created by transforming our ubr measurements to UBV photo-

Table 1

| Plate | Emulsion | Filter | Length of exposure | Colour |
|------------|-----------|---------|--------------------|--------|
| 3693, 3659 | 103 and 0 | UG 1 | 30 ^m | u |
| 3692, 3658 | 103 and 0 | Wratten | 6 ^m | b |
| 3691, 3657 | 103 and E | OR 1 | 3 ^m | r |

electric brightnesses of the stars of the field (uniformly distributed in maps 1, 2, 5, 6), published in Roslund's paper (1964). This system is indicated by a comma over the number of the star. The third system, marked with $a +$ sign above the number of the star, is Roslund's actual UBV system, and the photometric quantities were computed from his UBV data.

The stars, measured in this paper, are listed under the same number in the catalogue (Table 2) and in the identification maps 1 to 8. The investigated region in the Milky Way is of a rectangular shape, 34 square degrees in area. The region is divided into 8 parts according to the pattern in Figure 1. The numbers of the individual parts in the diagram correspond to the numbers of the identification maps, reproduced from the Palomar-Big Schmidt plates in the U range. The stars are numbered in the sense of increasing right ascension for the whole rectangular region; it begins with a right ascension of $17^{\text{h}}03^{\text{m}}$ from north to south (from -28.8 to -33.4° , i.e. currently from map 1 to map 5) and again for a right ascension larger by 20^{s} one proceeds from north to south. With a view to the density of the measured stars, the tens and units of the number of the star are given in the identification map with the star and the thousands and hundreds are indicated in the map margin by a vertical line.

The more detailed identification maps indicate the stars of the regions of opened star clusters. The stars from region Tr 28 are given under numbers 2130–2207 in the catalogue and shown in

map 9 by numbers identical with those in column 8 of Table 2. Stars 2208–2393 from region NGC 6405 are indicated in identification map 10 by numbers identical with those in column 8 of Table 2. The stars actually belonging to NGC 6405 are denoted by underlined numbers in map 10. Stars 2394–2460 of region NGC 6414 are denoted in map 11 by the numbers in column 9 of Table 2. A more detailed investigation of the appropriateness of the stars to the star clusters, as well as the pattern of the interstellar absorption in the neighbourhood of the star clusters, were published in Antalová's papers (1971, 1972). Only those stars in the catalogue have all their photometric quantities computed, which are uniquely located in the two-colour diagram.

The accurate equatorial and galactic coordinates were computed for 250 OB stars and are given in Table 3. These stars were published in the catalogue of the 250 OB stars itself (Antalová, 1970), however, in order to preserve continuity with previous papers, in which the old OB numbers were used, and with the present catalogue of 2460 stars, the renumbering is given in Table 3. These OB stars, together with the stars with computed B3–B5 spectra, given for the first time in this catalogue, are really early-type stars. In the notes to the catalogue, in Section 5, attention is, therefore, drawn to these OB stars, as well as to IS photometrically interesting stars from an earlier paper (1970).

The catalogue of 2460 stars (Tab. 2) contains the following data:

5. Catalogue Notes

- 1 Identical with star OB 1 Antalová (1970). Its equatorial and galactic coordinates have been computed, like those of all the other OB stars mentioned, independently determined as an OB star in the spectral review of Stephenson and Sanduleak (1971) and included in their catalogue Luminous Stars (LS) under number 3923, type OB⁻, $m_{pg} = 11.4$. All OB stars in identification map 5 belong to the region denoted as the O association by The (1961). Roslund (1966) assigned the OB stars in this region to the 1st inner galactic arm. The natural continuation of the region indicated by The, is the southern part of identification map 6 from star 101 μ through 164 up to 210.
- 5 The star is identical with star OB 2; the interstellar absorption, computed in our photometric system, is more probable; in the direction of star 5 one can observe a large number of faint stars.
- 18 Identical with OB 3; together with stars 19, 20, 21 little affected by interstellar absorption.
- 19 Identical with OB 4.
- 21 Identical with OB 5.
- 26 Identical with Ro 102 (Roslund, 1964).
- 33 Identical with Ro 104, spectral type according to HDE B9.
- 34 Identical with OB 6; spectral type according to HDE B5.
- 36 Identical with OB 7; in a direction close to the star there is strong interstellar absorption.
- 37 Identical with Ro 107.
- 38 Identical with Ro 109.
- 39 Identical with OB 8.
- 43 Identical with OB 9, Ro 120, LS 3961, CD -32^o12444, $m_{pg} = 9.9$, spectral type OB⁻.
- 44 Identical with Ro 119.
- 45 Identical with Ro 126.
- 46 Identical with Ro 127, spectral type according to HDE A0.
- 48 Identical with Ro 131; spectral type according to HDE B8.
- 49 Identical with RP 134.
- 50 Identical with OB 10.
- 54 Identical with Ro 138.
- 55 Identical with Ro 139, LS 3975, CD -32^o12460, $m_{pg} = 6.1$, spectral type OB⁻, HR 6383 B1 III.
- 56 Identical with Ro 141, spectral type according to HDE B9.
- 57 Identical with Ro 140, spectral type according to HDE A0.
- 60 Identical with Ro 145.
- 63 Identical with OB 11.

- 64 Identical with OB 12, stars 64, 71, 72, 75, 92 are in region of abundant stars, Star 92 is located at the edge of a little observed region and is affected by cloud DC 1699 with opacity 5 (Lynds 1962).
- 65 Identical with Ro 149, spectral type according to HDE B9.
- 67 Identical with Ro 151, spectral type according to HDE B8.
- 68 Identical with Ro 150, spectral type according to HDE A0.
- 69 Identical with Ro 152.
- 77 Identical with Ro 158, spectral type according to HDE B5.
- 80 Identical with OB 13, stars 70, 80, 85, 90 are in a region of abundant weak stars. These include stars 116 and 115 from map 6. Star 80 probably has a higher luminosity.
- 81 Identical with Ro 161.
- 87 Identical with OB 14.
- 88 Identical with OB 15, Ro 169, spectral type according to HDE B8.
- 89 Identical with Ro 170.
- 90 Identical with OB 16. See note on star 80.
- 91 Identical with Ro 171, spectral type according to HDE B9.
- 92 Identical with OB 17. See note on star 64.
- 93 Identical with Ro 175, spectral type according to HDE A0.
- 94 Identical with OB 18, Ro 176, LS 4003, CD -32°12518, $m_{pg} = 8.0$, spectral type OB⁻, according to HDE B0; in Gonzales (1955) this star is listed under number 90 and its spectral type was determined to be B0p.
- 95 Spectral type according to HDE B9.
- 96 Identical with Ro 179.
- 98 Identical with Ro 186.
- 100 Identical with 188.
- 101 Identical with OB 19, Ro 189, spectral type according to HDE B5.
- 102 Identical with Ro 191, spectral type according to HDE A0.
- 103 Identical with OB 20.
- 104 Identical with OB 21, Ro 195.
- 105 Identical with OB 22. A small cloud of weak stars with diameters of 1' can be observed in the red colour around star 105, to which the linear diameter $d = 0.3$ pc is appropriate.
- 106 Identical with Ro 196.
- 107 Identical with Ro 198, spectral type K2.
- 108 Identical with Ro 201.
- 109 Identical with Ro 204.
- 110 Identical with Ro 209.
- 111 Identical with Ro 208.
- 112 Identical with OB 23, Ro 210. Like 18, 19 and 21, star 112 belongs to the 1st inner galactic arm. In the direction of star 112 a small stellar cloud can be observed with a diameter of 18', to which a linear diameter of 18 pc is appropriate.
- 113 Identical with Ro 213, spectral type according to HDE B9. Stars 112, 114, 118, 119, 127, 164, 169, 210 are located at the distance of the 1st inner spiral arm.
- 114 Identical with Ro 215, OB 24, spectral type according to HDE B8.
- 116 Identical with OB 25. In the direction of 116 and 115 a small stellar cloud can be observed with a diameter of 30'. If it were at the same distance as star 116, its linear diameter would be 44 pc.
- 117 Identical with Ro 216, spectral type according to HDE A0.
- 118 Identical with OB 26, Ro 218, spectral type according to HDE A0.
- 119 Identical with OB 27, Ro 219, spectral type according to HDE A0.
- 120 Identical with IS 1 Antalová (1970). Stars 131, 139, 156 and 120 are located in a region with variable absorption. Dark clouds alternate with relatively well-transparent regions.
- 121 Identical with Ro 222, spectral type according to HDE B3.
- 122 Identical with Ro 223.
- 124 Identical with Ro 220.
- 125 Identical with Ro 225.
- 127 Identical with OB 28.
- 128 Identical with Ro 228.
- 129 Identical with Ro 229.
- 130 Identical with Ro 232.
- 131 Identical with OB 29. See note on 120.
- 132 Identical with Ro 234, spectral type according to HDE B5.
- 134 Identical with Ro 235.
- 135 Identical with Ro 239.
- 137 Identical with Ro 241.
- 138 Identical with Ro 243, spectral type according to HDE B3.
- 139 Identical with OB 30, this is a binary, LS 4058, CD -32°12575, $m_{pg} = 8.7$, spectral type OB⁻.
- 141 Identical with LS 4060, CD -32°12576, $m_{pg} = 8.8$, spectral type OB⁺ cc.
- 142 Identical with Ro 248.
- 143 Identical with Ro 250.

- 144 Identical with Ro 251, spectral type according to HDE A0.
146 Identical with 254.
147 Identical with Ro 253.
148 Identical with Ro 257.
149 Identical with Ro 258, spectral type according to HDE B9.
150 Identical with Ro 259, spectral type according to HDE B5.
151 Identical with Ro 260.
152 Identical with Ro 261.
154 Identical with Ro 263.
155 Spectral type according to HDE A0.
156 Identical with OB 31, Ro 265. See note on 120.
157 Identical with Ro 267, spectral type according to HDE A0.
158 Identical with Ro 268, spectral type according to HDE A0.
159 Identical with Ro 269.
160 Identical with Ro 270, spectral type according to HDE E0.
161 Identical with Ro 271.
162 Identical with Ro 273.
163 Identical with IS 2.
164 Identical with OB 32, spectral type according to HDE B8. See note on star 113.
169 Identical with OB 33.
170 See note on 188 and 189.
183 Spectral type according to HDE B5.
187 Identical with IS 4.
188 Identical with OB 34. See note on 189.
189 Identical with OB 35; spectral type according to HDE B8. Stars 188 and 189 are in a region abundant in weak stars, in the neighbourhood of the diffuse nebula NGC 6360, denoted by Gum (1955) as an H-alpha emission region.
195 Identical with OB 36.
196 Planetary nebula.
203 Identical with OB 37.
210 Identical with OB 38. Located in a dark cloud. Close to star 210 there is an H-alpha emission region with a diameter of 18', to which the linear diameter 8.3 pc.
221 Stars 221 and 241 are in a region where H-alpha emission can be observed, as well as a relatively abundant occurrence of weak stars.
223 Identical with OB 39. Stars 203, 223, 241, 221, 244 do not display any distinct concentration.
229 Spectral type according to HDE A1.
230 Spectral type according to HDE B9.
241 Identical with OB 41. See note on 221. The emission region is a continuation of the region of star 210. Diameter 42', to which the linear diameter 61 pc is appropriate.
244 Identical with IS 6. Located in the direction of a very strong dark cloud, so that $A_V = 4^m 0$ for $d = 1.0$ kpc implied by our photometry may be correct.
246 Spectral type according to HDE B9.
250 Identical with OB 40.
251 Identical with OB 42, spectral type according to HDE A0.
253 Identical with OB 43. Stars 250, 251, 253, 196, 260 for a group at the boundaries of maps 2 and 3. 196 and 260 are well-known planetary nebulae. Star 253 is probably at the distance of the 1st inner galactic arm, like stars 250 and 251.
260 Well-known planetary nebula.
266 Spectral type according to HDE B8.
272 Spectral type according to HDE A0.
277 Identical with OB 44; a stellar cloud with a diameter of 6' can be observed in its vicinity; this corresponds to a linear diameter of 5–8 pc.
286 Identical with OB 45.
287 Spectral type according to HDE (G).
288 Spectral type according to HDE (A0).
292 Spectral type according to HDE (B9).
293 Identical with IS 8, LS 4162, CD $-32^\circ 12739$, $m_{pg} = 8.8$, spectral type according to HDE A1 1b.
297 Spectral type according to HDE B9.
299 Spectral type according to HDE (B8).
305 Identical with OB 47.
307 Identical with OB 46; there is a dark cloud in its direction, therefore, the photometric data may be realistic.
315 Identical with OB 48.
317 Identical with OB 49. Stars 277, 307, 317, 405, 335 are further away than the 1st galactic inner arm.
320 Spectral type according to HDE B5. Identical with LS 4169, CD $-30^\circ 14215$, $m_{pg} = 11.0$, spectral type OB⁻.
321 Identical with OB 50. Stars 321 and 293 are at the distance of the 1st inner galactic arm.
325 Spectral type according to HDE (B8). Our photometric data agrees with LS 4170, spectral type OB⁻: $m_{pg} = 11.7$.

- 329 Spectral type according to HDE B8.
347 Spectral type according to HDE B8.
338 Identical with Av 1 star 8 (Antalová, 1972).
352 Spectral type according to HDE B8.
355 Identical with IS 9.
358 Spectral type according to HDE B9.
375 Identical with Av 1 No. 7.
388 Spectral type according to HDE B9.
399 Identical with Av 1 No. 13.
400 Identical with Av No. 14.
401 Identical with Av 1 No. 11.
402 Identical with Av 1 No. 10.
403 Identical with Av 1 No. 9.
405 Identical with IS 10. See note on 137.
429 Identical with OB 51.
430 Identical with Av 1 No. A.
431 Identical with Av 1 No. C.
432 Identical with Av 1 No. B.
433 Identical with Av 1 No. 6.
439 Identical with LS 4181, CD -32°12786, $m_{pg} = 8.4$, spectral type OB⁻.
449 Identical with OB 53.
451 Identical with OB 52, LS 4183, $m_{pg} = 12.3$, spectral type OB⁺ r.
453 Identical with OB 54, LS 4184, $m_{pg} = 11.7$, spectral type OB⁻. Stars 451 and 453 are in a region affected by dark cloud Lynds (1962) No. 1751. With a view to the LS data, star 453 has a realistic value of A_V , determined photometrically. 453 is a close binary.
455 Spectral type according to HDE B9.
458 Identical with Av 1 No. 22.
459 Identical with Av 1 No. 21.
460 Identical with Av 1 No. 12.
469 Spectral type according to HDE B8.
470 Identical with OB 56; very interesting star, possibly WR.
473 Spectral type according to HDE B2.
474 Identical with OB 55. Region Av 1 is identical with H II region Gum No. 68 (1955). The H II region is associated with star HD 158 186, spectral type B3, $m_{pg} = 7.3$ (a bright star to the north of 431). Neckel (1967) included star HD 158 186 in his catalogue under number 4649 with the following data: $1^{II} = 355^{\circ}90$, $b^{II} = 1^{\circ}60$, spectrum BO V, $A_V = 1.70$ for $r = 1.19$ kpc. G 68 is not uniformly bright, it has two brightenings. In the north there is 459 with a diameter of 5'. The second brightening contains stars 429, 474, 477. The star is identical with LS 4185, CD -31°14099, $m_{pg} = 10.1$, spectral type OB.
475 Identical with Av 1 No. 18.
476 Identical with Av 1 No. 19.
477 Identical with Av 1 No. 20.
492 Identical with Av 2 - C.
493 Identical with Av 2 - H.
494 Identical with Av 2 - A.
495 Identical with Av 2 - E.
496 Identical with Av 2 - D.
500 Spectral type according to HDE B8.
503 Spectral type according to HDE B9.
508 Spectral type according to HDE B5.
509 Identical with Av 1 No. 23.
510 Identical with Av 1 No. 15.
515 Identical with IS 14.
519 Identical with Av 2 No. F.
520 Identical with Av 2 No. G.
522 Identical with OB 57.
523 Spectral type according to HDE B5.
541 Identical with Av 3 - G.
542 Identical with OB 57.
549 Identical with Av 2 - B.
551 Spectral type according to HDE B8.
568 Identical with Av 3 - A.
582 Identical with OB 61.
600 Identical with OB 59.

- 611 Identical with Av 3 – D.
- 612 Identical with Av 3 – C.
- 615 Spectral type according to HDE B9.
- 616 Spectral type according to HDE B8.
- 617 Identical with OB 62.
- 618 Spectral type according to HDE B5. Identical with LS 4192, $m_{pg} = 11.4$, spectral type OB⁻.
- 619 Spectral type according to HDE B9. Identical with LS 4196, $m_{pg} = 11.7$, spectral type OB⁻.
- 626 Identical with OB 63.
- 627 Identical with OB 60.
- 630 Spectral type according to HDE B8.
- 632 Identical with IS 18.
- 641 Identical with IS 17. Region H II, denoted in Gum (1955) by number 67, is associated with NGC 6383 and has two brightenings at the edges. In region Av 3 70 stars were measured, of which 14 probably form a new O association. They are the following stars: 515, 541, 641, 644, 646, 684, 685, 711, 717, 718, 761, 788, 867. Star 644 is located in the brighter part of the emission region.
- 642 Identical with Av 3 – B.
- 643 Identical with Av 3 – F.
- 644 Identical with IS 16.
- 646 Identical with IS 15.
- 648 Identical with Av 3 – E.
- 650 Spectral type according to HDE B8.
- 656 Identical with OB 66.
- 677 Spectral type according to HDE B9.
- 680 Identical with OB 65. The interstellar absorption pattern in the neighbourhood of Av 3 as a function of the photometric distance can be investigated with the help of the following stars: 514, 543, 568, 677, 680, 684, 715, 915. The following stars are closer to us: 568, 611, 612, 642, 643 and 648, which are projected onto Av 3.
- 685 Identical with OB 64.
- 698 Spectral type according to HDE B3. Identical with LS 4199, $CD -29^{\circ}13662$, $m_{pg} = 11.0$, spectral type OB⁻.
- 711 Identical with IS 19.
- 716 Identical with OB 67. Stars 680 and 716 are located in region Av 3. The interstellar absorption pattern implies (see note on 680) that 716 has a higher luminosity than V.
- 720 Spectral type according to HDE B5.
- 724 Identical with OB 74.
- 725 Identical with OB 69, LS 4200, $CD -29^{\circ}13666f$, $m_{pg} = 11.7$, spectral type OB⁺. Stars 582, 617 and 725 are located in a direction little affected by dark clouds and the region has an abundant occurrence of weak stars. They belong to the 1st inner galactic arm.
- 726 Identical with OB 70.
- 731 Identical with OB 71.
- 735 Spectral type according to HDE B8.
- 736 Identical with OB 68.
- 750 Identical with OB 72. Spectral type according to HD B0. Identical with LS 4201, $CD -31^{\circ}14178$, $m_{pg} = 8.6$, spectral type OB. Star 750 is identical with 122 of Gonzales (1955), $m_v = 7^m5$, $m_{CPD} = 8^m4$.
- 761 Identical with OB 73. The H-alpha emission region, which is projected between NGC 6383 and Av 3, is strongly affected by a dark cloud. In this region stars 761, 787, 788, 824 are observed.
- 765 Identical with OB 76. Stars 626, 656, 731 and 765 are projected onto stellar cloud B and are further than 4 kpc.
- 772 Identical with OB 77.
- 776 Identical with OB 75.
- 787 Identical with OB 78.
- 788 Identical with IS 20.
- 791 Spectral type according to HDE B0.
- 794 Spectral type according to HDE B9.
- 815 Identical with OB 90. North of Gum 67 there is a region of very weak H-alpha emission. The following stars are observed in this region: 750, 632, 815, 862, 864, 997, 999, 1046, 1052, 956, 1107, 1145, 1150, 1189. Star 632 is located in a direction with an abundant occurrence of weak stars. Stars 956 and 1189 are located in a stellar cloud. There is a strong dark cloud in the direction of stars 997, 999, 1107 and 1150.
- 818 Identical with OB 79.
- 824 Identical with IS 21.
- 826 Spectral type according to HDE B9.
- 832 Identical with star F of NGC 6374, Antalová (1972).
- 833 Identical with star E of NGC 6374, spectral type according to HDE B8.
- 834 Identical with star B of NGC 6374.
- 836 Identical with D of NGC 6374, spectral type according to HDE A2.
- 837 Identical with C of NGC 6374.

- 838 Identical with star A of NGC 6374, spectral type according to HDE A0.
839 Spectral type according to HDE B9.
847 Spectral type according to HDE B9.
852 Identical with IS 26.
857 Identical with IS 27.
862 Identical with IS 22.
864 Identical with OB 81.
865 Spectral type according to HDE B2.
867 Identical with IS 23.
881 Identical with OB 82.
884 Spectral type according to HDE B9.
905 Identical with OB 106.
918 Spectral type according to HDE B9.
922 Identical with OB 84. Spectral type according to HDE B5.
923 Identical with OB 85.
933 Spectral type according to HDE B9.
939 Identical with OB 83.
947 Identical with LS 4213, CD $-30^{\circ}14384$, $m_{pg} = 9.4$, spectral type F2 II.
956 Identical with OB 86.
969 Spectral type according to HDE B9.
973 Spectral type according to HDE B8.
984 Identical with OB 87. Of the stars projected onto stellar cloud B the following are further away from us than 2 kpc: 627, 726, 736, 776, 857, 934, 939, 984, 1095, 1172, 1176, 1182.
985 Identical with IS 30.
997 Identical with IS 24. See note on 815.
999 Identical with OB 89. See note on 815.
1031 Identical with IS 31. Of the stars projected on stellar cloud B the following stars are at the distance of the 1st inner galactic arm: 600, 852, 985, 1031, 1038, 1141, 1183 and 1208.
1032 Spectral type according to HDE (B8).
1037 Identical with OB 90.
1038 Identical with OB 88.
1046 Identical with OB 91. See note on 815.
1049 Spectral type according to HDE B5.
1052 Identical with IS 25. See note on 815.
1065 Spectral type according to HDE B5.
1068 Identical with star No. 33 of NGC 6383 (Antalová, 1972). Spectral type according to HDE B3.
1069 Identical with star No. 31 of NGC 6383, spectral type Be.
1076 Spectral type according to HDE B8.
1080 Too large a value in the negative sense for $U-B$; the star was probably incorrectly identified in the U and B colour measurements.
1083 Spectral type according to HDE B9.
1095 Identical with OB 92. See note on 984.
1107 Identical with OB 93. Binary. See note on 815.
1109 Spectral type according to HDE B8.
1116 Spectral type according to HDE B5.
1139 Spectral type according to HDE B8.
1141 Identical with OB 95. See note on 1031.
1144 Spectral type according to HDE B8.
1145 Identical with OB 97. See note on 815.
1150 Identical with OB 96. See note on 815.
1152 Identical with OB 99. In region NGC 6383 there is a large scatter of interstellar absorption from $0^{m}6$ to $1^{m}3$. The following stars are located here: 1152, 1273, 1280, 1282, 1298, 1342, 1343. The colour diagram of 32 stars of our photometry substantiates the data of Eggen (1963) and The (1966), concerning the age of NGC 6383.
1154 Spectral type according to HDE B5.
1157 In region NGC 6383.
1158 The star is located in region NGC 6383.
1164 Identical with OB 101.
1165 Spectral type according to HDE B9.
1170 Spectral type according to HDE B3.
1172 Identical with OB 102. See note on 984.
1176 Identical with IS 33.
1178 Identical with LS 4232, $m_{pg} = 12.0$, spectral type OB.
1182 Identical with OB 98.

- 1183 See note on 1031.
- 1189 Identical with OB 105. See note on 815.
- 1190 Identical with OB 100.
- 1192 Identical with OB 103.
- 1200 Spectral type according to HDE A0.
- 1201 Spectral type according to HDE B8.
- 1204 Spectral type according to HDE B8.
- 1208 Identical with IS 28. See note on 1031.
- 1225 Identical with OB 104.
- 1226 Spectral type according to HDE B9.
- 1231 Identical with OB 110. In the neighbourhood of stars in the red colour one can observe a cloud of weak stars and also an emission region which has not been marked more specifically; it may belong to NGC 6360. The dimension of the region is about 5', which corresponds to a linear diameter of 7 pc.
- 1232 Well-known planetary nebula.
- 1233 Identical with OB 107. Of the stars in map 4, projected onto cloud B, the following early-type stars are further away than the 1st inner galactic arm: 1231, 1233, 1286, 1303, 1306, 1362, 1386, 1418, 1477, 1541.
- 1238 Identical with OB 108.
- 1241 Spectral type according to HDE B8.
- 1247 Spectral type according to HDE B9.
- 1251 Identical with OB 109.
- 1264 Identical with OB 113.
- 1267 Identical with LS 4244, $m_{pg} = 11.7$, spectral type OB⁻.
- 1269 Identical with OB 111.
- 1273 Identical with OB 114. A star from the broader neighbourhood of Tr 28 (Antalová, 1971).
- 1274 Spectral type according to HDE B9.
- 1280 Identical with IS 50.
- 1282 Identical with IS 49. See note on 1152.
- 1286 Identical with OB 112. See note on 1233.
- 1287 Identical with IS 53.
- 1288 Identical with OB 115.
- 1290 Identical with OB 117.
- 1292 Identical with OB 116. Broader neighbourhood of Tr 28.
- 1295 Spectral type according to HDE B3.
- 1297 Identical with OB 118.
- 1298 Identical with OB 119. Broader neighbourhood of Tr 28 and NGC 6383.
- 1301 Identical with LS 4258, CD -33°12246, $m_{pg} = 8.8$, spectral type OB⁺ (r).
- 1303 Identical with OB 121. See note on 1233.
- 1306 Identical with IS 34. See note on 1233.
- 1307 Spectral type according to HDE B8.
- 1311 Identical with IS 36. The following stars belong in front of the 1st inner galactic arm (region between cloud A and cloud B in Sagittarius): 1311, 1313, 1352, 1358, 1441, 1511, 1662, 1734, 1735, 1756, 1790, 1817, 1857, 1860, 1886, 1887, 1890, 1893, 1894, 1924, 1926, 1929, 1963, 1964, 1965, 1966, 2000, 2001, 2002, 2037, 2040, 2043.
- 1313 Identical with OB 122. See note on 1311.
- 1319 Spectral type according to HDE B5.
- 1323 Identical with IS 35. Of the stars in map 4, projected onto cloud B in Sagittarius, the following stars belong to the 1st inner arm: 1323, 1361, 1475, 1542.
- 1326 Identical with OB 124; located beyond the 2nd inner galactic arm.
- 1327 Spectral type according to HDE B5.
- 1335 Identical with IS 58.
- 1336 Identical with OB 128.
- 1337 Identical with IS 57.
- 1338 Identical with IS 59.
- 1339 Identical with OB 125.
- 1342 Identical with IS 55; located in the broader neighbourhood of Tr 28.
- 1343 Identical with IS 54.
- 1345 Identical with LS 4268, $m_{pg} = 11.4$, spectral type OB.
- 1346 Identical with LS 4265, m_{pg} over 13.6, spectral type WR h, new star of the WR type.
- 1349 Spectral type according to HDE B9.
- 1352 Identical with OB 136. See note on 1311.
- 1354 Spectral type according to HDE B8.
- 1355 See note on 1311. Identical with LS 4279, $m_{pg} = 11.5$, spectral type OB⁻.
- 1358 Identical with IS 37. See note on 1311.
- 1361 Identical with IS 38. See note on 1323.

- 1362 Identical with OB 137. See note on 1233.
 1363 Identical with OB 134. See note on 1233.
 1364 Spectral type according to HDE B8.
 1365 Identical with IS 60.
 1366 Identical with IS 63.
 1367 Identical with IS 64.
 1368 Identical with IS 61.
 1369 Identical with OB 135.
 1370 Identical with OB 139.
 1371 Spectral type according to HDE B8.
 1375 Identical with OB 133.
 1376 Identical with OB 138.
 1377 Identical with LS 4276, $m_{pg} = 11.4$, spectral type OB.
 1381 Identical with IS 39. The following stars are projected onto region C (between clouds A and B in Sagittarius) and are located at the distance of the 2nd inner galactic arm: 1381, 1446, 1467, 1504, 1506, 1601, 1603, 1627, 1628, 1664, 1698, 1710, 1712, 1733, 1751, 1760, 1761, 1783, 1854, 1860, 1883, 1888, 1889, 1930, 1996, 2043, 2112.
 1386 Identical with OB 145. See note on 1233.
 1392 Physical association with 1393 and 1395.
 1393 Identical with OB 140.
 1395 Identical with OB 141.
 1396 Identical with IS 66.
 1399 Identical with IS 67.
 1402 Identical with OB 143.
 1406 Identical with IS 62.
 1407 Spectral type according to HDE F8.
 1408 Spectral type according to HDE B9.
 1418 Identical with OB 148. See note on 1233.
 1424 Identical with OB 149.
 1425 Identical with OB 150. Star 1425 is located in the centre of a condensation of weak stars; the region is severely affected by absorption.
 1426 Identical with OB 146.
 1429 Identical with OB 151.
 1432 Spectral type according to HDE B5.
 1433 Identical with IS 68.
 1434 Identical with OB 147.
 1435 Spectral type according to HDE B9.
 1437 Identical with OB 160, LS 4301, spectral type OB.
 1438 Spectral type according to HDE B9. The star is located in a region projected onto stellar cloud B in Sagittarius, however, more to the north of the region discussed in note on star 1323. This more northern region is probably associated with the emission region given as NGC 6360. It includes the following stars: 1299, 1407, 1437, 1438, 1463, 1488, 1489, 1490, 1513, 1531, 1532, 1533, 1534. Stars 1437, 1531 and 1534 are further away than the 1st inner arm and probably form a 0 association together with stars 1286, 1303, 1233, 1231.
 1441 Identical with OB 158. See note on 1311.
 1446 Identical with OB 156. See note on 1381.
 1453 Identical with IS 72.
 1454 Identical with OB 163.
 1455 Identical with OB 159.
 1457 Identical with IS 69, Region Tr 28.
 1463 Spectral type according to HDE B8.
 1464 Spectral type according to HDE B9.
 1467 Identical with OB 169. See note on 1381.
 1475 Identical with OB 167. At the distance of the 1st inner galactic arm: see note on 1031.
 1477 Identical with OB 162. See note on 1233.
 1481 Identical with OB 170.
 1482 Identical with OB 165.
 1484 Identical with OB 168.
 1487 Identical with IS 70, Region Tr 28.
 1488 Identical with OB 171, LS 4306, CD $-29^{\circ}13809$, $m_{pg} = 10.1$, spectral type OB⁺. See note on 1438.
 1491 Spectral type according to HDE B8.
 1504 Identical with OB 175. See note on 1381.
 1506 Identical with OB 173. See note on 1381.
 1511 Identical with OB 172. See note on 1311.
 1513 Spectral type according to HDE B9.
 1527 Spectral type according to HDE B9.
 1531 Identical with OB 177. See note 1438.

- 1534 Identical with OB 181. See note on 1438.
- 1536 Identical with OB 221.
- 1541 Identical with IS 40. Belongs to the group in note on 1381.
- 1542 Identical with OB 184.
- 1544 Identical with OB 238.
- 1547 Identical with OB 176.
- 1548 Spectral type according to HDE B9.
- 1550 Identical with OB 179. A small cloud of weak stars in the vicinity.
- 1558 Identical with OB 182.
- 1560 Identical with OB 183.
- 1561 Identical with OB 178. Region Tr 28.
- 1563 Identical with IS 76. Region Tr 28.
- 1565 Identical with OB 180.
- 1566 Spectral type according to HDE B9.
- 1575 Identical with OB 201.
- 1596 Identical with OB 185.
- 1581 Identical with IS 81.
- 1601 Identical with OB 188. See note on 1381.
- 1603 Identical with OB 191. See note on 1381.
- 1619 Identical with OB 189. In region of NGC 6405.
- 1620 Identical with OB 190. Stars beyond NGC 6405: 1620, OB 199, and OB 215 in NGC 6405.
- 1621 Identical with 186.
- 1625 Identical with OB 187.
- 1627 Identical with OB 194. See note on 1381.
- 1628 Identical with IS 41. See note on 1381.
- 1637 Identical with OB 193.
- 1638 Identical with OB 196.
- 1641 Identical with OB 192. Region NGC 6405.
- 1646 Identical with OB 195.
- 1651 Spectral type according to HDE B8.
- 1662 Identical with IS 42. See note on 1311.
- 1664 Identical with OB 197. See note on 1381.
- 1677 Identical with IS 82. NGC 6405.
- 1698 Identical with IS 43. See note on 1381.
- 1708 Identical with OB 238.
- 1710 Identical with OB 202. See note on 1381.
- 1712 Identical with OB 200. See note on 1381.
- 1742 Spectral type according to HDE (B8).
- 1749 Spectral type according to HDE B9.
- 1751 Identical with OB 207. See note on 1381.
- 1756 Identical with OB 204. See note on 1311.
- 1760 Identical with OB 203. See note on 1381.
- 1761 Identical with OB 205. See note on 1381.
- 1763 Identical with IS 84. Belongs to an interesting group of stars to the north of NGC 6405: 1763, 1766, 1768, 1797, 1800, 1801, 1823, 1829, 1831, 1896, 1900, 2014.
- 1766 Identical with OB 206.
- 1768 Identical with OB 208.
- 1773 Identical with IS 85. NGC 6405.
- 1783 Identical with IS 44. See note on 1381.
- 1786 Identical with OB 209.
- 1790 Identical with OB 211. See note on 1311.
- 1797 Identical with IS 89. See note on 1763.
- 1800 Identical with IS 88. See note on 1763.
- 1801 Identical with IS 87. See note on 1763.
- 1804 Identical with IS 86.
- 1805 Identical with OB 210.
- 1813 Identical with OB 212. Binary.
- 1823 Identical with OB 216. See note on 1763.
- 1829 Identical with IS 91. See note on 1763.
- 1831 Identical with OB 213. See note on 1763.
- 1835 Identical with IS 90.
- 1844 Identical with OB 217. This star was additionally identified with star No. 77 of Roberts (1962) where it is given as a really WR star.
- 1847 Spectral type according to HDE B9.

1859 Identical with IS 45, possibly PN.
 1860 Identical with OB 218. See note on 1831.
 1867 Identical with OB 219.
 1877 Identical with IS 95.
 1883 Identical with OB 224. See note on 1381.
 1888 Identical with OB 222. See note on 1381.
 1896 Identical with 223. See note on 1763.
 1900 Identical with IS 93. See note on 1763.
 1908 Identical with OB 226.
 1911 Identical with IS 96. Region of NGC 6405.
 1912 Identical with IS 97. Region of NGC 6405.
 1921 Identical with OB 228.
 1924 Identical with OB 230. See note on 1311.
 1926 Identical with OB 227. See note on 1311.
 1929 Identical with OB 225. See note on 1311.
 1930 Identical with IS 46. See note on 1381.
 1931 Spectral type according to HDE B9.
 1941 Identical with OB 229.
 1942 Spectral type according to HDE (B8).
 1948 Identical with IS 98.
 1949 Identical with OB 231.
 1959 Spectral type according to HDE B8.
 1982 Identical with IS 99.
 1996 Identical with OB 232. See note on 1381.
 1997 Identical with OB 233.
 2014 Identical with OB 234. See note on 1763.
 2020 Spectral type according to HDE B8.
 2036 Spectral type according to HDE B8.
 2037 Identical with IS 47. See note on 1311.
 2040 Identical with OB 236. See note on 1311.
 2043 Identical with OB 235. See note on 1311.
 2051 Identical with OB 240.
 2060 Identical with OB 237.
 2065 Identical with OB 242.
 2084 Identical with OB 241.
 2103 Spectral type according to HDE B8.
 2106 Identical with OB 246.
 2112 Identical with OB 243. See note on 1381.
 2119 Identical with OB 249.
 2125 Spectral type according to HDE B8.
 2126 Spectral type according to HDE B9.
 Tr 28 Stars 2130 – 2207 are shown in the detailed map 9.
 NGC 6405. Stars 2208–2393 are shown in the detailed map No. 10.
 NGC 6416. Stars 2394–2460 are shown in the detailed map No. 11.

*This region was investigated in more detail by Antalová (1971). NGC 6405. Stars 2208–2393 are shown in the detailed map 10. The spatial distribution of the stars was investigated by Antalová (1972).

NGC 6416. Stars 2394–2460 are shown in the detailed map 11. The distribution of the stars and the interstellar absorption pattern were investigated in more detail by Antalová (1972).

*Computation of the Interstellar Absorption:
A_V as a Function of Direction and Distance*

Using the formulae in Section 3, the interstellar absorption A_V was computed for the individual stars. The results are given in Table 2, column 5. The plate from the Palomar Big Schmidt was divided into $10^5 \times 1^\circ$ areas, 12 in all. The centres of the individual areas are given in Table 4. The interstellar absorption as a function of distance for the individual areas is illustrated in Figures 2, 3, 4. In the whole of area PP12 the total visual absorption increases sharply at a distance of 1–2 kpc. A very sharp increase of interstellar absorption occurs in particular in areas PP 12–1, PP 12–4, and PP 12–5. This agrees well with the occurrence of the spiral arm at a distance of 1.4 kpc. The interstellar absorption pattern in PP 11 is determined by the individual OB stars and given in Table 5.

These values of interstellar absorption agree well with observations of other authors. Westerlund (1959) gives measurements of 3 stars, belonging to the region investigated by us:

| HR | l ^{II} | b ^{II} | Sp | V | d | A _V |
|-------|-----------------|-----------------|-----------|------|------|----------------|
| 6347 | 350° | +3.0 | O9.5 I ab | 6.18 | 1.26 | 1.9 |
| 6450 | 350 | -1.0 | B4 Ia | 6.41 | 1.82 | 2.1 |
| i Sco | 350 | -6.0 | F2 Ia | 3.02 | 1.05 | 0.5 |

HR is the number of the star according to the Revised Harvard Photometry (1908). HR 6347 is located in the direction of PP 12–9, or PP 12–12. The given value $A_V = 1.9$ for $d = 1.3$ agrees with our result. HR 6450 is located in the direction of PP 12–11; $A_V = 2.1$ for $d = 1.8$ agrees with our result.

For regions $l^{II} = 351^\circ$ and $b^{II} = -2^\circ$ Neckel (1966) determined the value $A_V = 4^m$ for $d = 2$ kpc. The determination of the interstellar absorption is based on 3077 OB stars, 204 delta Cephei stars and 129 opened star clusters. The direction of Neckel's region is identical with the direction of PP12–10 and the result given is the maximum value of A_V for 2 kpc.

Wehiger (1967) gives the following values of the total visual absorption in dependence on direction and distance for the direction towards the galactic centre ($l^{II} = 0^\circ$):

| d | 0.5 | 1.0 | 2.0 | 3.0 | 5.0 | 7.0 kpc |
|-----------------|-----|-----|-----|-----|-----|---------|
| b ^{II} | | | | | | |
| +1°5 | 2.6 | 2.6 | 2.6 | 2.6 | 2.6 | 2.6 |
| -0°3 | 1.5 | 1.6 | 2.4 | 2.9 | 3.2 | 3.2 |
| -1°8 | 0.9 | 1.9 | 1.9 | 1.9 | 2.0 | 2.2 |

As opposed to Wehiger, who maintains that the absorption does not change with distance in the direction $l^{II} = 0^\circ$, $b^{II} = +1^\circ 5$, our results for this direction show A_V as a function of d in PP12–1, PP12–2 (Fig.2). Our value agrees well with the value given by McCuskey (1963), who gives a sharp increase of A_V in the direction to the galactic centre from $0^m 6$ to $2^m 2$ at distances of 0.7–1.0 kpc from the Sun.

As regards the interval of galactic longitude 352° – 359° we observed in general a sharp increase of interstellar absorption at distances of 1–2 kpc. The value of the absorption continues to increase to $3^m - 4^m$ at a distance of 3 kpc. In some directions a large scatter in A_V was observed due to the cloud structure of the interstellar matter. Apart from the dark clouds, described by Lynds (1962), other dark clouds can be identified in the investigated region.

DC1: Shown in identification map 1 to the north of DC 1716, in the interval $RA_{1950.0} 17^h 05^m 10^s - 17^h 07^m 52^s$, $Decl_{1950.0} -29^\circ 09' - -29^\circ 50'$. It is projected onto stars

| No. | A_V | d | I^{II} | b^{II} |
|-----|-------|-----|----------|----------|
| 12 | 1.7 | 0.8 | | |
| 7 | 1.6 | 1.0 | | |
| 5 | 1.7 | 1.3 | 354.8 | +6.6 |

DC 2: Shown in identification map 3 in the vicinity of star 253, dimensions $5' \times 5'$. Projected onto stars

| No. | A_V | d | I^{II} | $+b^{II}$ |
|-----|-------|-----|----------|-----------|
| 253 | 3.7 | 4.5 | 357.4 | +3.5 |
| 250 | 2.4 | 2.0 | 357.4 | +3.6 |

outside DC 2 there are the following stars:

| | | | | |
|-----|-----|-----|--|--|
| 288 | 1.2 | 1.3 | | |
| 174 | 2.9 | 3.7 | | |
| 267 | 3.3 | 4.2 | | |

DC 3: Shown in identification map 4 in the region of stars 1488, 1531, 1534. This region, larger in area, was denoted by Lynds as DC 1776 with opacity 2, but the small region between stars SAO 3 (1966)

| No. | $AR_{1950.0}$ | $DC_{1950.0}$ |
|--------|----------------------|-------------------------|
| 185570 | $17^h 34^m 52^s 879$ | $-29^\circ 04' 57'' 21$ |
| 185567 | $17 34 45.517$ | $-29 26 50.44$ |

certainly has an opacity in excess of 2.

Cloud DC 3 is projected onto stars

| No. | A_V | d | I^{II} | b^{II} |
|------|-------|-----|----------|----------|
| 1534 | 3.3 | 3.3 | 358.8 | +1.1 |
| 1533 | 3.4 | 2.6 | | |
| 1532 | 2.8 | 0.8 | | |
| 1599 | 2.1 | 1.4 | | |
| 1488 | 2.5 | 1.9 | 359.0 | +1.3 |
| 1530 | 2.9 | 2.9 | | |
| 1531 | 3.7 | 6.7 | 359.0 | +1.2 |
| 1489 | 3.1 | 1.1 | | |

Stars 1534 and 1533 are in the centre of DC 3.

Outside DC 3 are stars

| | | | | |
|------|-----|-----|------------|------|
| 1295 | 1.5 | 1.0 | SAO 185537 | |
| 1437 | 2.6 | 3.3 | 358.9 | +1.4 |
| 1349 | 0 | 0.5 | | |

For $d = 1$ kpc in the direction of DC 3 the value of the absorption is higher than $I^{II} 3$ (cf. PP 12-1, Fig. 2).

DC 4: Also shown in identification map 4 in the interval $RA_{1950.0} 17^h 37^m 59^s - 17^h 40^m 17^s$ and $Decl_{1950.0} -29^\circ 55' - -30^\circ 09'$. It differs from DC 1769 in opacity and is smaller in area. It is projected onto stars

| No. | A_V | d | I^{II} | b^{II} |
|------|-------|-----|----------|----------|
| 1924 | 3.7 | 4.2 | 358.7 | 0 |
| 1959 | 1.7 | 1.1 | | |
| 1996 | 3.3 | 2.1 | 358.6 | -0.1 |
| 1997 | 3.7 | 4.2 | 358.6 | -0.1 |
| 1926 | 4.1 | 4.7 | 358.5 | 0 |
| 1925 | 2.9 | 2.1 | | |
| 1850 | 3.2 | 3.3 | | |
| 1851 | 2.6 | 3.0 | | |
| 2036 | 1.6 | 1.1 | | |
| 1960 | 2.8 | 3.3 | | |

DC 5: Shown in identification map 6; projected onto the following stars:

| | | | | |
|-----|-----|-----|-------|------|
| 103 | 1.7 | 1.7 | 353.0 | +3.0 |
| 104 | 1.0 | 1.4 | | |
| 102 | 1.2 | 0.8 | | |
| 114 | 1.9 | 0.9 | 353.4 | +3.0 |
| 11 | 0.6 | 1.8 | | |

DC 6: Shown in identification map 6.; Projected on to the following stars:

| | | | | |
|-----|-----|-----|-------|------|
| 164 | 2.2 | 1.1 | 354.3 | +2.3 |
| 169 | 1.9 | 1.0 | 354.9 | +2.3 |
| 195 | 3.5 | 3.7 | 354.7 | +1.9 |
| 210 | 2.6 | 1.4 | 354.6 | +1.8 |
| 198 | 0.7 | 1.0 | | |
| 167 | 3.1 | 4.4 | | |

DC 7: Shown in identification map 7; projected onto the following stars:

| | | | | |
|-----|-----|-----|-------|------|
| 307 | 3.9 | 4.8 | 354.8 | +1.4 |
| 321 | 2.0 | 1.5 | 354.9 | +1.4 |
| 284 | 1.9 | 0.7 | | |

A detailed investigation of the interstellar absorption in the neighbourhood of the opened star clusters Tr 28, NGC 6405, NGC 6416, NGC 6383 was made in earlier papers (Antalová, 1971, 1972).

Acknowledgements

The author of the present paper thanks

Dr. W. Babcock, the director of the Hale Observatories for the opportunity to use plates from the 48-inch Palomar-Schmidt.

Dr. L. Perek for valuable photographic material, the idea of its elaboration and stimulating discussions.

The staff of the Konkoly Observatory, Budapest for use of their iris photometer and hospitality.

Dr. A. Hajduk and Dr. J. Štohl from the Astronomical Institute of the Slovak Academy of Sciences, Bratislava, for computer programming assistance.

Mr. M. Antal from the Astronomical Institute of the Slovak Academy of Sciences, Skalnaté

Pleso Observatory for his help in measuring rectangular coordinates of stars for calculating the exact equatorial and galactic coordinates of 250 stars.

UBV FOTOGRAFICKÁ FOTOMETRIA HVIEZD V OBLASTI
AR₁₉₅₀ : 17^h03^m - 17^h41^m DECL₁₉₅₀ : -28.8° - -33.4°

Katedra technickej fyziky, Vysoká škola dopravná, Žilina. Československo

Súhrn

UBV fotografická fotometria 2460 hviezd z vnútornej časti Galaxie skúma prevažne hviezdy spektrálnych tried B3 až A0. 250 hviezd má spektrálny typ 0 – B3. Pozorovací materiál pre fotografickú fotometriu získal Big Schmidt na Mt. Palomare (tab. 1, obr. 1). Metóda výberu hviezd pre fotometriu je založená na porovnaní priemerov kotúčkov hviezd vo farbách *ubr* na blinkovom komparátore. Fotografické jasnosti hviezd sa merali na irisovom fotometri Beckerovho typu na Konkoly Observatory v Budapešti.

Fotometrický systém tejto práce vznikol nadviazaním na fotoelektrické merania hviezd v NGC 6405 (Rohlf s i., 1959). Transformačné rovnice z *ubr* na UBV sa vypočítali minimálne zo 40 hviezd a sú označené číslom (1). Presnosť merania uvádza vzťah (2).

Katalóg 2460 hviezd obsahuje merané veličiny: V , $U-B$ a $B-V$ i vypočítané veličiny podľa rovníc (3): medzihviezdnu absorpciu A_V , fotometrickú vzdialenosť d a spektrálny typ. Všetky výpočty predpokladajú V . triedu luminosity hviezd.

Skúmaná oblasť v Mliečnej ceste je obdĺžnikového tvaru o ploche 34 stupňov štvorcových. Oblasť je rozdelená na osem častí podľa schémy na obr. 1. Čísla jednotlivých častí na schéme zodpovedajú číslam identifikačných mapiek 1 až 8. Katalógovým číslom je hviezda označená aj na identifikačných mapkách. Číslovanie hviezd na mapkách prebieha v smere rastúcej rektascenzie pre celú obdĺžnikovú oblasť; začína sa pri rektascenzii 17^h03^m postupujúc od severu na juh a pre hodnotu rektascenzie o 20^s vyššiu znova zo severu na juh. Pri hviezde z identifikačnej mapke sa vzhľadom na hustotu meraných hviezd uvádzajú desiatky a jednotky čísla hviezdy, na okraji mapy sú kolmou čiarou vyznačené intervaly stoviek a tisícok.

Presné equatoriálne a galaktické súradnice 250 OB hviezd sú v tabuľke 3.

Detailný opis oblasti, výskyt temných oblakov, súvislosť hviezdy s inými rannými hviezdami, vytváranie fyzikálnych skupín meraných hviezd sa diskutujú v Poznámkach ku katalógu, odsek 5.

Závislosť medzihviezdnej absorpcie od dvoch premenných: smeru a vzdialenosti sa skúma na podklade Katalógu 2460 hviezd (tab. 2). Nameranú závislosť znázorňujú obr. 2, 3 a 4. Stredy jednotlivých smerov sa uvádzajú v tabuľke 4. Pre galaktické dĺžky od 357 do 359° sa pozoruje prudký vzrast A_V vo vzdialenosti 1–2 kpc. Rozptyl A_V , spôsobený oblakovou štruktúrou medzihviezdnej hmoty, bližšie sa skúma v odseku 6. Pre pozorovaný interval galaktickej dĺžky 352–359°, teda vo vnútornej časti Galaxie, nastáva vzrast A_V vo vzdialenosti 1–2 kpc, ďalej sa hodnota A_V ustáľuje a podľa smeru nadobúda hodnotu 3^m–4^m pre vzdialenosti väčšie ako 3 kpc.

UBV ФОТОГРАФИЧЕСКАЯ ФОТОМЕТРИЯ ЗВЕЗД В ОБЛАСТИ

$AR_{1950} : 17^{\text{h}}03^{\text{m}} - 17^{\text{h}}41^{\text{m}}$ $Decl_{1950} : -28.8^{\circ} - -33.4^{\circ}$

Резюме

UBV фотографическая фотометрия 2460 звезд из внутренней части Галактики изучает преимущественно звезды спектральных классов В3 – А0. 250 звезд имеют спектральный тип 0 – В3. Материал наблюдений для фотографической фотометрии получен большой камерой Шмидта на Монт Паломаре (табл. 1, фиг. 1). Метод подбора звезд для фотометрии основан на сравнении диаметров дисков звезд в цветах *ubv* с помощью блинкомпаратора. Фотографические магнитуды звезд были измерены с помощью ирис-фотометра типа Беккера в обсерватории имени Конколы в Будапеште.

Фотометрическая система этой работы основана на базе фотоэлектрических измерений звезд в NGC 6405 (Rohlfis и др. 1959). Уравнения для трансформации из *ubv* системы в *UBV* вычислены по 40 звездам минимально и обозначены номером (1). Точность измерения дана отношением (2).

Каталог 2460 звезд содержит измеренные величины V , $U-B$, $B-V$ и рассчитанные величины по уравнениям (3): межзвездное поглощение A_V , фотометрическое расстояние d и спектральный тип. Во всех расчетах предполагается класс светимости V.

Изучаемая область Млечного Пути прямоугольной формы с площадью 34 квадратных градусов. Область разделена на 8 частей, как показано на рис. 1. Номера отдельных частей на схеме соответствуют номерам идентификационных карт 1–8. Номером каталога звезда обозначена и на картах идентификации. Нумерация звезд на картах идет в направлении увеличения прямого восхождения для всей прямоугольной области, начинается прямым восхождением $17^{\text{h}}03^{\text{m}}$, продолжаясь от севера к югу, и для величины прямого восхождения на $20^{\text{с}}$ больше предыдущей, снова от севера к югу. Ввиду плотности измеряемых звезд, для звезды на карте идентификации приведены десятки и единицы номера звезды, на краю карты перпендикулярно линией обозначены интервалы сотен и тысяч.

Точные экваториальные и галактические координаты 250 ОВ звезд находятся в таблице 3.

Детальное описание области звезды, наличие темных облаков, связь звезды с другими молодыми звездами создание физических групп измеренных звезд обсуждаются в "Примечаниях к каталогу", абзац 5.

Зависимость межзвездного поглощения от двух переменных – направления и расстояния изучена на основе Каталога 2460 звезд (табл. 2). Измеренная зависимость приведена на рис. 2, 3, 4. Центры отдельных направлений приведены в табл. 4. Для галактической долготы от 357° до 359° наблюдается резкое возрастание A_V на расстоянии 1–2 кпс. Рассеяние A_V , вызванное облаковой структурой межзвездной материи, более подробно рассмотрено в абзаце 6. Для наблюдаемого промежутка галактической длины 352° – 359° , т.е. во внутренней части галактики, происходит нарастание A_V на рассеянии 1–2 кпс, потом величина A_V стабилизируется и в зависимости от направления приобретает величину 3^{M} – 4^{M} для расстояний больших, чем 3 кпс.
