# Neutron monitor NM64

Rozmer / Size: cca 5x2x1 m

Hmotnost' / Weight: cca 12000kg

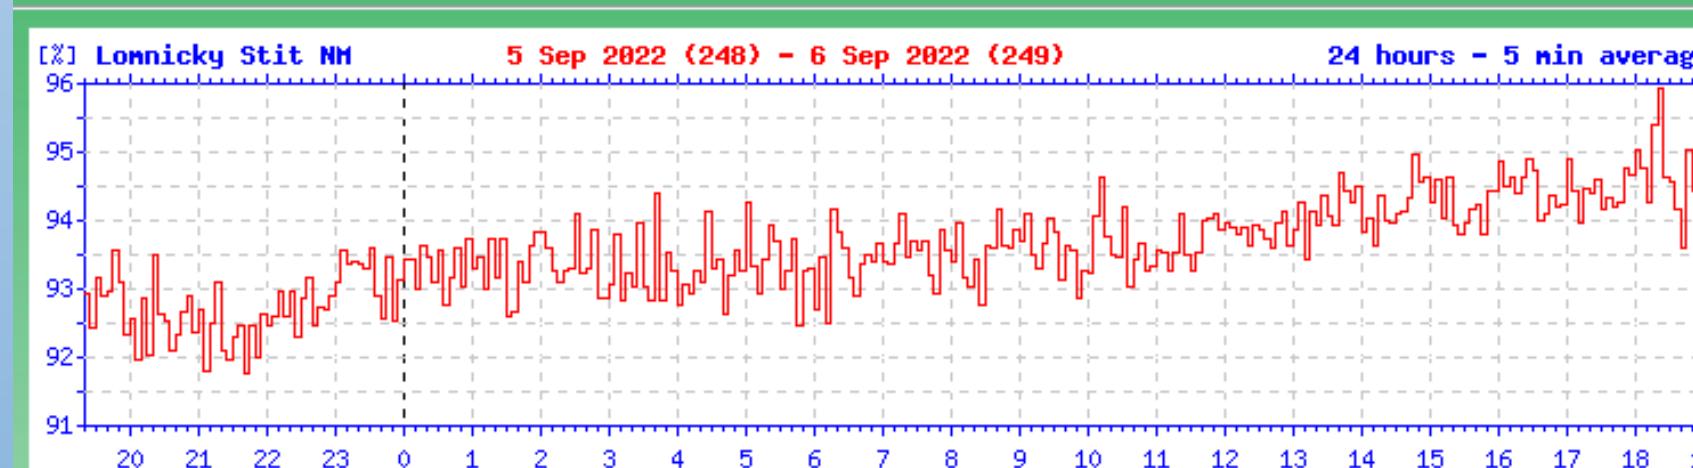

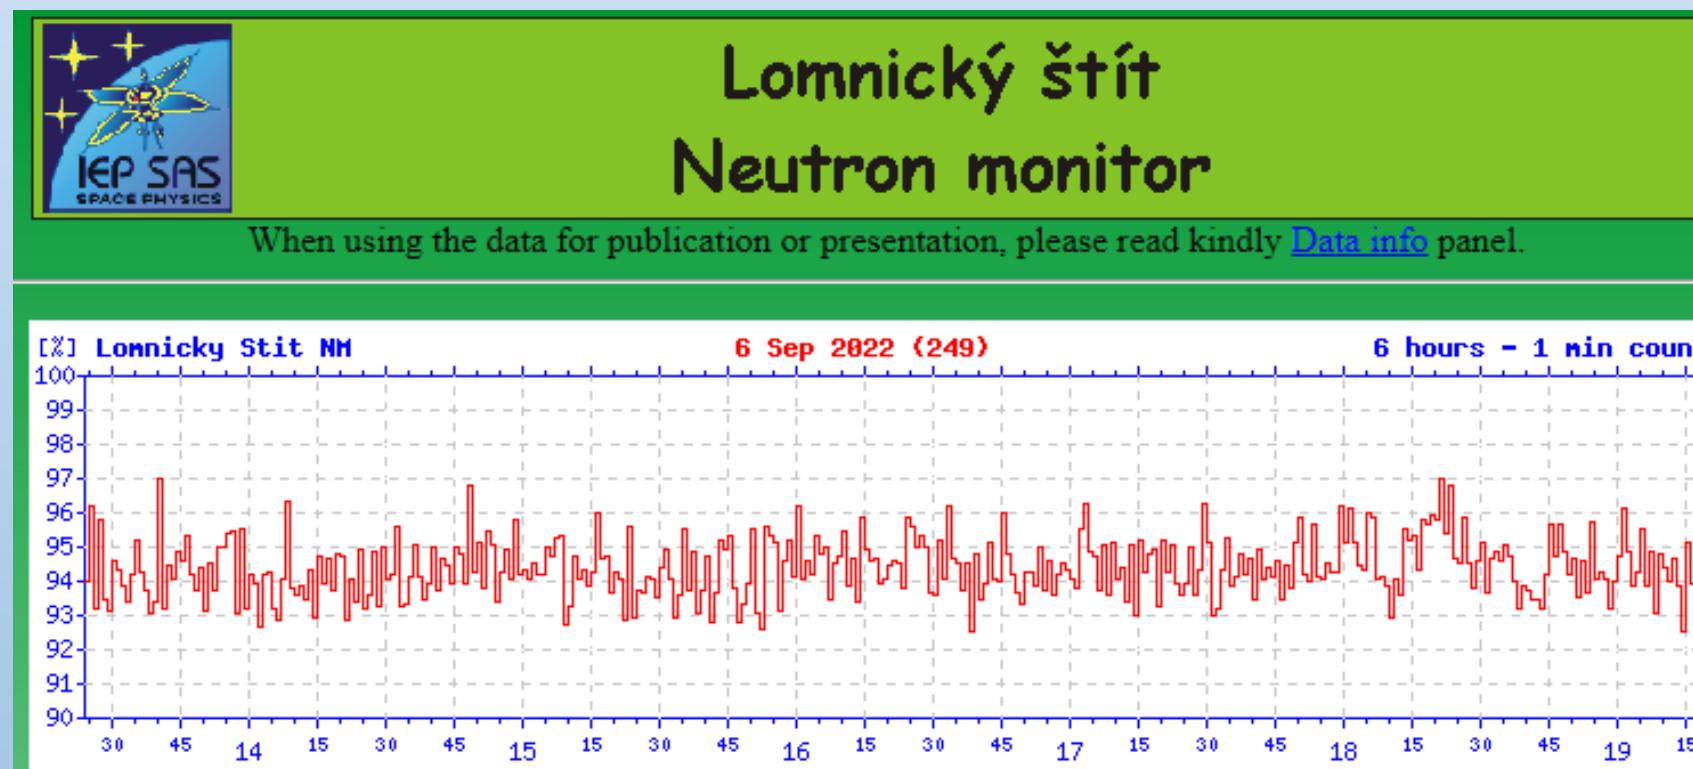

## Detekcia sekundárnych neutrónov

- primárne kozmické žiarenie
- interakcia s atómami atmosféry (O, N)
- vznikajú sekundárne častice (p, n, m, e, ...)
- sekundárne neutróny sa detegujú v NM64
- počet registrovaných pulzov cca 1 800 000/hod.

## Secondary neutrons detection

- primary cosmic rays
- interaction with atmospheric atoms (O, N)
- secondary particles are formed (p, n, m, e, ...)
- secondary neutrons are detected in NM64
- number of registered pulses cca 1 800 000/hour

**Neutron monitor online data: <http://neutronmonitor.ta3.sk>**

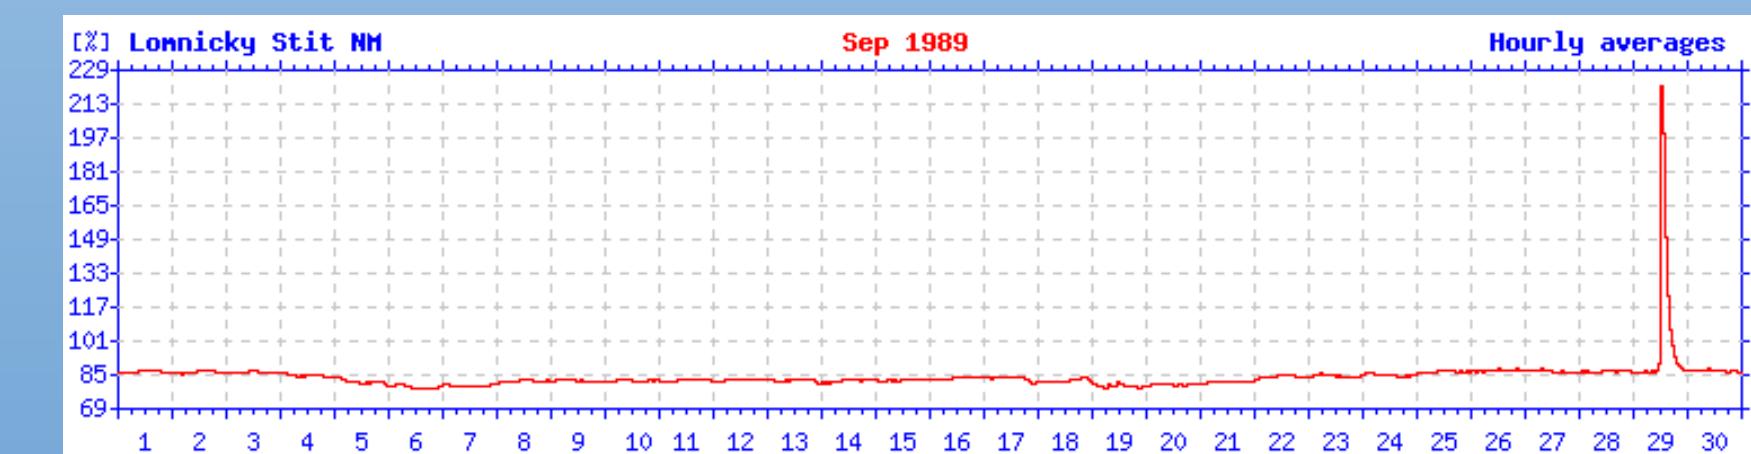

# Nepretržité meranie od 1.12.1981

## Continuous measurement from 01-DEC-1981

# Detekcia slnečných neutrónov - 29.9.1989

## Solar neutrons detection - 29-SEP-1989

**SEVAN**

# Detektor sekundárneho kozmického žiarenia

## Secondary cosmic rays detector
